

# JOB OPPORTUNITY ...

[Site/ Design/ Project Engineers] / [Business Development]

## **HotRot™ is set to announce major UK expansion projects and relocation**

**Over the coming few months we expect to announce a number of new large biowaste treatment contracts. As a result we shall be moving to new larger premises in the Cambridge area from which to base our operations.**

The company is therefore looking for high quality individuals to add to our existing team to assist us in the delivery of existing commitments and the design/ development of projects that are at an early stage. We are looking for capable, practical people who may have the following or similar skills & experience:

- Good understanding of the design, layout and operation of biowaste treatment facilities
- Experience of working with key regulators and achieving compliance for sites & compost
- Good practical engineering skills
- Experience working on and maintaining process plants
- Experience in customer facing situations
- Good internet and computing skills

HotRot offers a portfolio of biowaste treatment technologies from dry anaerobic digestion systems, through advanced IVC and tunnel composting/ biodrying systems. Over the next 18 months we expect to install over 100,000 tonnes per annum of treatment capacity.

Working for a growing company offers the opportunity to undertake diverse roles within the business from supporting our business development activities, through to the design and delivery of new projects. We expect our employees to contribute across the full spectrum of activities and to travel throughout the UK (and possibly Europe) with projects from Scotland to the South East of England. Preferably we would be looking to employ people with some form of engineering qualification or demonstrable experience

HotRot's clients include local authorities, waste companies, developers and individual businesses (such as zoo's, mines, campuses and shopping centres). Our solutions range from the treatment of a few hundred tonnes a year of organic waste in-situ to 50,000tpa+ central treatment sites and from commercial food wastes through to animal and sewage wastes.

*For an informal discussion, please contact James Lloyd on (01234) 354785 or 07725 9556659.*
